

Studio System™

Office-friendly, affordable metal 3D printing.
Designed for engineers.

An end to end solution

Print

Unlike laser-based systems that selectively melt metal powder, the printer extrudes bound metal rods—similar to how an FDM printer works. This eliminates the safety requirements often associated with metal 3D printing while enabling new features like the use of closed-cell infill for lightweight strength.

Debind

The debinder prepares parts for sintering by dissolving primary binder. With a low emission design, the debinder requires no external ventilation and is safe to use in an office environment. Automatic distillation and recycling of our proprietary debind fluid means there is no need to refill between every cycle.

Sinter

Fully-automated with closed-loop thermal control, the furnace is the first to deliver industrial-strength sintering and an office-friendly package. Built-in profiles are tuned to every build and material to ensure uniform heating and cooling without the residual stresses introduced in laser-based systems.

Printer specs

Build volume

w 30 x d 20 x h 20 cm
(12 x 8 x 8 in)

Max part dimensions (post-shrink)

w 25.5 x d 17 x h 17 cm
(10 x 6.7 x 6.7 in)

Printheads

Dual, quick-release print heads

Minimum layer height

50 µm

Heating

Heated build area & plate

Platform

Cloud, browser-based

Debinder specs

Solvent

Desktop Metal proprietary debind fluid

Fluid management

Automatic distillation and recycling

Footprint

w 74 x d 57 x h 102 cm
(29 x 23 x 40 in)

Vapor management

Low emission design, no external ventilation required

Platform

Cloud, browser-based

Furnace specs

Gas connection

2x 900 L on-board gas cannisters

Footprint

w 138 x d 75 x h 162 cm
(64 x 55 x 30 in)

Peak temperature

1400 °C (2552 °F)

Platform

Cloud, browser-based
